TECHNICAL BULLETIN #T-25

8/13, 10/21

(Formerly TB #112)

USE OF ALUMINUM OR ALUMINUM ALLOY DIVIDER STRIPS IN EPOXY TERRAZZO

Aluminum or aluminum alloy divider strips are acceptable to use in epoxy terrazzo if the strip does not come in direct contact with an uncured cement substrate. Where the substrate is not cured, it is imperative that the contact surface of the strip be fully covered with a non-cement adhesive or setting material.

Because of the potential for corrosion due to a negative reaction with Portland cement, the use of aluminum or aluminum alloy divider strips is not recommended with cement terrazzo systems.
